Range Star is a web based payment system platform, giving you every payment option in one device.

With our full system, you can accept **PIN codes, Credit Cards, Mobile Payments, Membership Cards, or use our phone app** at your golf ball dispenser.

Give your customers access to our mobile app to manage their range account directly from their mobile device!

To fully explore all the options available to you with the Range Star system, please visit **www.rangestargolf.com** to log into the software for an interactive Demo!

Our platform is easy to use, and allows the golf course to manage range accounts seamlessly from any location, while keeping an eye on range activity in real time.

Our latest product add on for Range Star, a ball level sensor, can also alert you if your ball machine needs to be refilled!

If you have any other questions please give e-Range a call!

a better idea of how this system could work for you!**

FAQ's about *Range Star*

Who is the credit card processor for Range Star, and what are the fees?

The credit card processor for Range Star is Global Payments, in both Canada, and the US. The credit card processing fees are highly dependent upon volume, and also average transaction amount. As an example, if you average $15.00/basket your fees will work out to be 2%-2.5% + $0.08-$0.10/transaction*

What connection type does Range Star use?

Range Star has the ability to be connected in multiple ways. It comes with a SIM card inserted, and will connect via cellular network. You can also hardwire a connection directly into a router connected to the internet. It also has the ability to run off WIFI. You can choose any, or all of the above connection methods. If one connection fails, (i.e the cellular network goes down) the device will fail-over to the next connection method.

How does the mobile APP work?

The phone app is an add on feature, it is $2.00/ phone app licence. The customer can use this rather than a card. It functions similarly to a card. You load the account with a certain $ value, and the customer can purchase a QR code through their account on the app. You can also give them the ability to top up their account right through the app with a credit card rather than coming back into the shop (you set up an ecomm account with the credit card processor for this function).

What are the annual fees for Range Star?

The first year of service fees and technical support are included with the purchase of the Range Star system. After the first year, for technical support and service fees you will be invoiced $700.00 (USD) annually (for one device) for the full system, or $500.00 (USD) annually (for one device) for the credit card and Range card system . Reduced additional service fees will be charged for additional devices

*Example provided is an approximation of the payment processing rates for a transaction size of $15.00 eRange makes no claims that the payment processing fees will be exactly as shown herein
